SUMMARY

Systems Engineer with 4+ years shipping production software, focused on the backend: REST APIs with Node.js (NestJS) and Go (Fiber), SQL and NoSQL data modeling, and AWS infrastructure with Docker and Terraform. Designed and built two live SaaS platforms end to end, CanchaYa and Dotra: architecture, database, backend, web frontend and mobile apps.

EXPERIENCE

CanchaYa — cancha-ya.com

Backend / Full Stack Developer — Tech Lead

Remote

05/2023 – Present

SaaS that lets sports venues in Colombia manage bookings, schedules, customers and payments.

- Designed and built the whole platform: architecture, data model, backend, web dashboard and mobile app.
- NestJS backend on MongoDB, Angular frontend and React Native mobile app.
- AWS infrastructure (Lambda, S3) defined as code with Terraform.
- Multichannel notifications and real-time booking sync over WebSockets.

Dotra — dotra.online

Backend / Full Stack Developer

Remote

12/2025 – Present

Delivery and transport platform with a restaurant vertical.

- Defined the platform architecture, data model and PostgreSQL database.
- Built the NestJS backend and Angular web frontend; contributed to the React Native mobile apps.
- Mobile apps currently in Google Play review.

OFILED Tech Solutions

Full Stack Developer

Cali, Colombia

05/2024 – 09/2025

- Cut complex SQL Server queries from 15 s to 5 s by tuning indexes and stored procedures.
- Improved Node.js API response time by 30% by refactoring middleware and applying SOLID principles.
- Led the migration of 2,000+ people records with zero data loss.
- Migrated the frontend from Angular 14 to 16, cutting initial load time by 20%.
- Integrated Azure Maps and access-camera validation for identity control.

Soluciones 360 SAS

Backend Developer

Bogotá, Colombia (remote)

08/2022 – 01/2024

- Built NestJS and PHP 8 (Lumen) microservices, increasing concurrency capacity by 40%.
- Refactored legacy code, reducing technical debt by about 25% in production systems.
- Connected WordPress to ERPs through custom plugins, onboarding 500+ customers per month.

Independent work

Freelance Developer

Remote

2020 – Present

- Automated workflows with n8n and Make for corporate clients, saving about 15 hours per week.
- Built Go (Fiber) and Node.js REST APIs on PostgreSQL for logistics and services clients.

PROJECTS IN PROGRESS

TurnoGo — Home-services marketplace

In development

- NestJS, PostgreSQL and TypeORM backend; Angular 19 frontend; geospatial search for nearby providers.
- Reproducible Docker Compose environments and versioned migrations.

SKILLS & LANGUAGES

Backend: Node.js, NestJS, Express, Go (Fiber), PHP 8 (Lumen), REST APIs, WebSockets, microservices, SOLID

Frontend & mobile: Angular (14–19), TypeScript, React Native, Ionic, Tailwind CSS

Databases: PostgreSQL, SQL Server, MySQL, MongoDB, TypeORM, query and index tuning

Cloud & DevOps: AWS (EC2, S3, Lambda), Terraform, Docker, Docker Compose, Ubuntu Server, GitHub Actions

AI & automation: Claude Code, n8n, Make, LLM API integration

Languages: Spanish (native), English (intermediate B1, fluent technical reading)

EDUCATION & CERTIFICATIONS

Universidad del Pacífico

B.Eng. in Systems Engineering

Buenaventura, Colombia

2015 – 2022

Certifications: Google Cybersecurity Professional (2025) · AI, Talento Tech – U. Libre (2025) · Udemy: Scrum Master, AWS Solutions Architect (2024)
